#	OTHER (PLEASE DESCRIBE)	DATE
1	They are observed coming from the vein that blood is being removed from i.e. if the carotid artery is being injected with fluid, the clots will come from the jugular vein.	1/11/2023 11:27 AM
2	Mainly in jugular veins, smaller fibrous structures in arteries	1/6/2023 1:22 AM
3	In venous drainage	12/28/2022 9:00 AM
4	When I massage I pull them from the jugular vein with my drainage forceps. I suspect I am also breaking them free from somewhere but, not sure.	12/22/2022 8:55 PM

EMBALMER BLOOD CLOT SURVEY

5	They come out of the draitube while embalming	12/19/2022 4:55 PM
6	Hard to describe where in some cases....just pulled out during "normal" embalming	12/19/2022 3:24 PM

Q8 COMMENTS (Optional): In case you want to describe in greater detail what you are observing concerning these clots.

Answered: 42 Skipped: 86

#	RESPONSES	DATE
1	The "fibrous" structures being described are blood clots that have always been observed during embalming. They are ante-mortem (before death) clots. The "grape jelly" clots being described are clots that form post-mortem due to the coagulation of blood. I have not noticed a difference in clotting, nor do I have knowledge who is vaccinated or not vaccinated when I am embalming. I do not believe that the COVID-19 vaccination has anything to do with an alleged increase in clotting in the deceased.	1/11/2023 11:27 AM
2	I started using Defrige as a pre-injection and it makes all the clots come out. The only reason I started seeing more clots was this chemical. Every case I pre-inject equal more clots, if I do not use it it equal less clots.	1/10/2023 12:02 AM
3	I've seen clotting coming from most any of the points of incision. I mainly embalm in common carotids and have seen many white fibrous clots about the time the vaccine came out. I've seen an increase since covid for the jelly clots.	1/6/2023 9:39 PM
4	I have had a lot of blood that came out dry that looked like "splattered paint". I have had a number of cases where I could hardly get any drainage.	1/6/2023 4:45 PM
5	I observed a whitish fibrous in a case this year 2023. It was located in the left femoral artery.	1/6/2023 6:33 AM
6	There have always been some clots. In the recent couple years they have increased in number and size on average	1/4/2023 4:15 PM
7	99 percent of the bodies I embalm have not been in refrigeration, and have been embalmed within three hours of death. And circulation of fluid to limbs has become increasingly difficult. In direct correlation with the increase of clotting of both types. Cancer patients when embalmed before refrigeration have never had circulation problems/clots prior to 2021. Since 2021 98 Percent do have complications.	1/3/2023 7:11 PM
8	I have noticed clots becoming larger and longer during this time. Many more deceased bodies have coagulation in the blood in recent years.	1/3/2023 2:00 PM
9	Grape jelly clots were observed closer to the end of Covid. 2-3rd round.	1/3/2023 10:42 AM
10	Vaccinated deaths	1/3/2023 9:32 AM
11	Although I have not noticed any change in the presence or structure of clots, I have noticed over the past 15 years that bodies don't seem to firm up as easily as they did previously.	1/3/2023 9:18 AM
12	Deceased came in and prior to death complained of shortness of breath, anxiety, and depression. Family reported the deceased had been vaccinated for COVID and had their boosters. The deceased was heavily clotted during the embalming process.	12/30/2022 6:47 PM
13	almost every body that I embalm have lots of clots. The last year or two. They all have different shapes, mostly small, misshapen. even my mother, who I embalmed couple hours after death, was loaded with small misshapen clots. the folks I talked to, said their loved ones had the shots.	12/30/2022 1:02 PM
14	never seen any white clots or any increase in grape jelly clots, not sure what you are getting at? do you believe this is vaccine related or something? embalmed over 500 people from 2020 to now and never have seen any of this	12/30/2022 12:17 PM
15	People that were Covid confirmed had bad grape jelly clots. It was early 2021 when we started seeing the white fibrin structures being pulled out of both the veins and the arteries. Prior to 2021, we NEVER pulled a clot from an artery. I just pulled a white structure from the right common carotid yesterday. The tricky part about question 4 is that we only raise arteries from a few specific arterial spots. I'm embalming 99% from the right common carotid. So the person	12/30/2022 9:25 AM

EMBALMER BLOOD CLOT SURVEY

could have clots throughout their abdomen, arms, legs, head (wherever), and when we push embalming fluid through, we're trying to move those clots to where we can reach them with our forceps to pull them out. We often can't even get our forceps all the way into the vein because of blockages. We have also seen a lot more swelling in arms, legs, genitals, etc. than we used to. Typically that was always do to congestive heart failure. Nowadays I feel as if I am putting in an "edema reducing" fluid into close to 50% of the bodies I'm embalming. The number used to be closer to 10%.

16	I have seen these over my career of 27 years. I have seen more of them recently. I used to think they were the lining of the artery inverting and coming out. But recently I dissected one and found it to not be tubular. I also wondered if they were Atherosclerosis.	12/30/2022 1:16 AM
17	I started to ask other embalmers if they were experiencing the same thing with bodies. Some of the fibrous structure clots where as long as 4inches and the grape jelly clots almost looked like 3 inch long leaches	12/29/2022 12:42 AM
18	Larger than usual jelly clots....some incredibly large. I have not seen those that you describe as white....I will look for them now	12/28/2022 8:24 PM
19	The clots almost look like large night crawler worms. They are usually very long. They kind of branch off the main clot. I started noticing them after the Covid vaccine came out. I've been embalming for the last 13 years and have only stated seeing these clots for the last year or two.	12/28/2022 8:14 PM
20	I have seen zero changes to the presentation of human remains in the last few years. It is clear that this is a poor attempt at farming anecdotes to malign the Covid vaccine. Please don't do this, or claim that anonymous survey data is any sort of substitute for rigorous scientific research.	12/28/2022 4:21 PM
21	Stop trying to relate clots to COVID...	12/28/2022 3:08 PM
22	All covid positive bodies have them, and a huge increase in their incidence since the "vaccine" was created.	12/28/2022 9:00 AM
23	My clients that have had the Covid Vaccine and have passed of Covid have had remarkably more clots. So much that I began to ask families if their loved ones have had the vaccine.	12/27/2022 7:28 PM
24	This is not very well written for the facts that you are looking for.	12/27/2022 3:22 PM
25	This is the scariest thing I've seen happen in the last 20 years . I worry every day if me or my family have them growing inside us .	12/27/2022 12:00 PM
26	The video that started this survey is from fake news. Vaccines do NOT cause abnormal blood clotting.	12/26/2022 5:46 PM
27	The blood contains what I have been calling is "Coffee Grounds". The blood looks like it has coffee grounds in them. Also the blood is very thick.	12/25/2022 9:54 PM
28	White fibrous clots seem normal.	12/25/2022 8:56 PM
29	Out of the 25 case's from covid maybe 2 cases have had any such clots and or jelly.	12/24/2022 2:24 AM
30	I'm embalming approximately 200 deceased human remains per year and have yet to see these unusual clots that have talked about.	12/23/2022 4:55 PM
31	I've seen a video and I've heard one embalmer talk about this but I haven't observed it yet.	12/23/2022 9:43 AM
32	I have been embalming since 2014. I started in Colorado where I worked for 5 years and NEVER saw the white clots. Since 2021 working in Alabama they are very prominent and occur in the majority of my embalming now.	12/23/2022 8:28 AM
33	Different than usual clots I've seen. Whiter, much more fibrous. COVID? Environment?	12/23/2022 1:52 AM
34	Just observing a lot more cases seem to have the larger jelly type clots this past year. Have not seen white fibrous ones though.	12/23/2022 12:23 AM
35	Decedents who had COVID had more blood clots than we have ever seen	12/22/2022 10:43 PM
36	The fibrous cloudy white clots stick to the stainless steel surface of the embalming table which makes them more noticeable.	12/22/2022 8:30 PM

EMBALMER BLOOD CLOT SURVEY

37	Some of the fibrous clots were 6"-8" long and almost impossible to break with forceps.	12/22/2022 6:22 PM
38	Large fibrous white string like clots. Being removed from arteries and veins, growing larger overtime. A normal embalming is taking 3 to 4 hours whereas before it was an hour and a half to two.	12/22/2022 10:48 AM
39	The fibrous clots I've observed are white/tan in color. They averaged the length of a sharpie pen. I had not heard of other embalmers experiencing this the first time I saw it (we do very little embalming here, on average 1-2 a month) so I documented my findings. I have now seen the documentary "Died Suddenly" and know this is a phenomenon for most embalmers.	12/21/2022 12:29 PM
40	In the "fresh" bodies (around one hour passing) we have noticed an increase blood clots.	12/19/2022 4:55 PM
41	The video used on the newest documentary is of myself pulling the very long fibrous strand from the vein.	12/19/2022 11:13 AM
42	These seem to be almost exclusively in the vaccinated and we have never seen this level of clotting nor ever seen the white clotting prior to 2021, especially in the young as we do now	12/19/2022 5:41 AM
